REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Claim 21 requires a blend of a rubber (A) and a rubber gel (B) wherein the glass transition temperature of rubber (A), TgA, is in a range of from 0 to 8 degrees higher than the glass transition temperature of the rubber gel (B), TgB. While Kawakami et al. teaches that the glass transition temperature of the rubber (A) and the rubber gel (B) should be close, it does not give any guidance on which component should have a higher glass transition temperature. Previously cited US 6,403,720 to Chino et al. teaches that a rubber gel blended, as the high Tg polymer, with a rubber component having a lower Tg promotes incompatibility. However, this reference encourages the incompatibility and teaches that the Tg of the rubber should be at least 10° C less than the Tg of the rubber gel (Col. 1, lines 60-65). This teaching goes what is claimed. Therefore, since there is no teaching in the prior art of record, or in the knowledge of one of ordinary skill in the art, as to the rubber component having a glass transition temperature which is within 8 degrees higher than that of the rubber gel component, this claim and its dependent claims are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
